

Resetting Your Password

Introduction

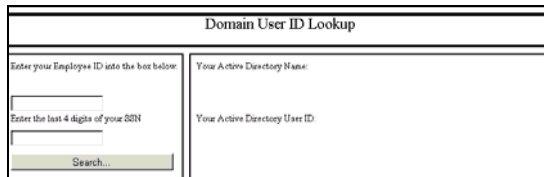

Beginning September 21st, 2005 the Sisters of St. Francis Health Services is introducing a new password management tool, P-Synch that will allow you to reset and/or unlock your password yourself without calling the Help Desk. This password management tool will be accessible to everyone from the SSFHS Intranet or Facility Home Page under Quick Links.

P-Synch Password Resetting Tool

The tool works by storing some of your personal information and then using this information to authenticate you when you have forgotten or locked your password. The first step to using this tool is to register. You will be asked to fill in some personal information that will be used to verify your identity should you forget your password. Once you have registered any time you forget or unlock your password you will be able to reset it yourself.

I don't know my User Id?

If you don't know your user id you will be able to look it up using the Domain User ID Lookup. You will enter your 6-digit employee number (located on the back of your badge) and the last 4 digits of your Social Security Number to find your user id.

The screenshot shows a web form titled "Domain User ID Lookup". It has two columns of input fields. The left column contains two text boxes: "Enter your Employee ID into the box below:" and "Enter the last 4 digits of your SSN". The right column contains two text boxes: "Your Active Directory Name:" and "Your Active Directory User ID:". Below the left column is a "Search..." button.

1. From the SSFHS Intranet main page click **Reset Password**.
Note: The Domain User ID Lookup box will be displayed, click on Link.
 2. Type your 6-digit employee id (located on the back of your badge).
 3. Type the last 4 digits of your Social Security Number.
 4. Click **Search**.
Note: You will have 3 attempts to retrieve your user id. If you fail 3 times in 30 minutes you will be locked out of the Domain User ID Lookup.
 5. After retrieving your User Id, close window using the X in the upper right.
-

I never sign on to a computer why do I need to register?

If you do not use a computer as part of your normal job duties you will still need to register with the P-Synch tool so that you know your user id and password. You will need to use them for some upcoming Employee Self Service functions. In November all employees will be using the Employee Self Service on-line system to enroll for benefits. This Employee Self Service system requires that you know your user id and password.

Registering

The steps below will walk you through how to register on the P-Synch password management system. You must register prior to using the tool and you will only have to register one time.

Alverno Information Services
Self-service login
Please enter your network login ID:
My login ID on P-Synch
Press to continue:

Alverno Information Services (XHX)
Verify password
Enter password for SSFHS:
Your Password:
Press to verify password:

Your current challenge response Q&A:
You must configure a valid Q&A profile before the other options are available to you. You have not defined enough questions.
In the future, P-Synch may ask you to prove your identity by answering some personal questions. Please add personal, secret questions and answers to the following list, by filling in the blanks and pushing the Submit button.
• Clear the answer to a pre-defined question to remove it.
• Clear the text or answer of a free-form question to remove it.

Alverno's predefined questions
Minimum questions (3), Questions still required (3)

Question	Answer	Modified by	Modified at
What are the last four digits of your Social Security Number? (4-4 chars)	<input type="text"/>		
What is your mother's maiden name? (2-20 chars)	<input type="text"/>		
What city were you born in? (3-20 chars)	<input type="text"/>		

Alverno Information Services
What would you like to do?
Passwords [Pick a new password.](#)
Accounts [Add my login accounts.](#)
You have registered 1 account(s) on 1 out of 25 target(s).
Identifying information [Answer personal questions.](#)
You have answered 3 question(s) (3 are required).

1. Type your user id and click **Login**.
2. Type your password and click **Verify password**.

Note: If you have never signed on any system before, this will be your 8-Character Default password. If you don't know your default password, check with your manager or call the Help Desk.

3. You will answer all 3 questions to configure your Q & A Profile. After you have typed in your answers to the questions click **Submit Changes**.

Note: All three questions must be answered in order to register.

4. The **What would you like to do?** screen will appear. From here you can:
 - Change your password.
 - Add accounts (not being used at this time)
 - Change your identifying information.

If you are just registering click **Logout**.

Reset/Change Your Password

After you have registered for this tool you will be able to reset/change/unlock your password at any time by following the steps below.

Note: If you need to go back a page while you are in the tool use the P-Synch back button and not your browser back button.

Alverno Information Services
Select an authentication method

Please select an action:

Use a password Use password verification on selected target systems.

Answer personal questions Use pre-defined personal question set.

1. Type your user id and click **Login**.
2. Click **Use a Password**

OR

Click **Answer Personal Questions** if you need to record a new Q & A Profile.

Challenge-response
You must answer all of the following questions correctly before proceeding.

Question	Answer
What are the last four digits of your Social Security Number?	<input type="text"/>
What is your mother's maiden name?	<input type="text"/>
What city were you born in?	<input type="text"/>

Continue

3. Answer your personal identifying questions and click **Continue**.

What would you like to do?
Your last successful login was at 8/25/2005 10:20 AM. You've had 0 failed attempts since your last successful login.

Passwords [Pick a new password.](#)
You last changed your passwords using P-Synch on 8/25/2005 9:07 AM, via the self-service reset module.

Accounts [Add my login accounts.](#)
You have registered 1 account(s) on 1 out of 25 target(s).

Identifying information [Answer personal questions.](#)
You have answered 3 question(s) (3 are required).

Logout

4. Click **Pick a new password**.

Note: The requirements for selecting a secure password will be listed to help you.

5. Type your new password, type it again to confirm it and click **Change my password**.

You will receive a message stating your password has been changed.

Note: If your account is just locked and you don't want to change your password you can click **Unlock**.

Select a new password for XHX:

New password:

Confirm:

Change my password

Change these passwords:

XHX/5SFHG

Select all

Clear all

Your password must have at least eight (8) characters and **not** be a dictionary word. You must select at least one character from three of the following groups:

- Uppercase Alpha: A B C D E F G H I ...
- Lowercase Alpha: a b c d e f g h i ...
- Numeric: 1 2 3 4 5 6 7 8 9 0
- Special Characters: ! @ # \$ % ^ & _ - + ?

Unlock all accounts

Unlock all accounts **Unlock**

6. Click **Close this window**.

7. Log out of your workstation and then log back in using your new password.

Note: Step #7 is **not** necessary if using a generic account or a shared kiosk.

Guidelines for choosing a secure password

Passwords are intended to allow access to authorized users, so great care must be taken when choosing a password. The goal when choosing a secure password is to avoid making it easy for others to guess but at the same time making it is easy for you to remember.

Here are some guidelines to follow when choosing a new password.

- Passwords should be at least 8 characters.
 - They need to contain characters from the following groups:
 - > Upper case letters
 - > Lower case letters
 - > Numbers
 - You cannot reuse a password. The system remembers the last 6 passwords you have used so they cannot be reused.
 - They should **not** be just a word found in the dictionary. It only takes minutes for a password of this type to be discovered.
 - They should **not** contain your full name or user id.
 - Use something that is familiar to you and easy for you to remember. **Note:** It is very important that passwords are never written down.
-

Examples of secure passwords

Words with embedded numbers:

- **December25**
- **Numbers55**

Use phrases you might see on a vanity plate:

- **4Mom2gofast**
- **I m4Purdue**

Password phrases:

- **IluvIndy500**
 - **GOPacersGO**
 - **H0wUD0ing**
 - **Live4today**
-

Who do you call for help?

If you have questions about how to use this new password resetting tool or what a secure password is, please call the corporate Help Desk.
